ReAct Agent + ML Tool Orchestration

🗨️

[25, 50000, 1, 12000, 3, 2, 45, 1]

🛠️

Tool Selected: SVM Classifier

📊

Prediction: Prediction: 0 (confidence: 70.76%)

💡

Reasoning: The agent detected structured numerical financial data, therefore the SVM classifier was selected.

SVM works effectively for structured tabular datasets and provides strong classification performance.

Important financial observations:

Agentic Multi-Model Categorization System

ReAct Agent + ML Tool Orchestration

🗨️

[35, 120000, 1, 8000, 1, 0, 5, 0]

🛠️

Tool Selected: SVM Classifier

📊

Prediction: Prediction: 0 (confidence: 96.39%)

💡

Reasoning: The agent detected structured numerical financial data, therefore the SVM classifier was selected.

SVM works effectively for structured tabular datasets and provides strong classification performance.

Important financial observations:

• monthly income is relatively low • customer has high overdue days • customer has missed payments history • customer already has multiple previous BNPL loans • high number of installments increases financial burden

🔥 Features Used: • Age • Monthly Income • Employment Status • Purchase Amount • Installments • Previous BNPL Loans • Overdue Days • Missed Payments

Tool Selected: Spam Classifier

📊

Prediction: Prediction: spam (confidence: 97.66%)

💡

Reasoning: The agent detected that the input is textual data containing spam-like language patterns such as offers, rewards, prizes, or promotional wording.

The Spam Classifier model was selected because it performs well for text classification tasks.
